

Please read the entire instructions for use carefully before you start using Kidsner Bath Gel.

Do not throw this leaflet away. If you have any questions, or if you are not sure about anything, please ask your general practitioner or pharmacist. For more information or a new copy of instructions visit: www.kidsner.com

WHAT IS KIDSNER BATH GEL USED FOR?

Kidsner Bath Gel is used for rapid relief from irritation, itching and sensitivity associated with chickenpox.

WHAT IS CHICKENPOX?

An acute, infectious disease, usually contracted by young children. Chickenpox is caused by the varicella virus. The condition is characterised by a fever and itchy, red spots usually appearing on the chest and torso first, and then spreading in clusters over the entire body. The red spots turn into small blisters, which will form scabs in a week after drying up.

HOW TO RECOGNISE CHICKENPOX?

The first visible sign of chickenpox is usually a skin rash, but some people experience fatigue and fever 24 hours prior to appearance of red spots (blisters). Once skin lesions (caused

by red spots and blisters) are present, chickenpox is usually accompanied by a fever, abdominal pain and a general feeling of fatigue and frailty for several days. The "rash" typically appears as flat red spots, which rise like small pimples. The spots transform into small blisters, called vesicles, that resemble small drops of water on a red base. The top of these vesicles can be easily scratched off, or break open by themselves and become crusted, sometimes within hours of first appearance. Itching may be quite intense at this stage. This intense itching can increase the temptation to scratch the vesicles. The crusts (if not scratched) fall off in 9–13 days after formation.

WHAT YOU SHOULD KNOW BEFORE USING KIDSNER BATH GEL?

Kidsner Bath Gel does not contain any harsh, toxic chemicals and is safe to use on children's skin.

There are no known side effects related to the use of Kidsner Bath Gel. When in doubt, apply some foam to the inside of the forearm and leave for some time. When an itching red spot appears we advise you not to use Kidsner Bath Gel.

No interference with other medications is known. No contraindications are known to be associated with the use of Kidsner Bath Gel.

IS CHICKENPOX DANGEROUS?

Chickenpox and its symptoms are generally not dangerous for healthy children. Serious complications such as skin infections, pneumonia and fevers, though rare, should be taken seriously and a general practitioner should be consulted if these symptoms are observed.

WHERE TO KEEP YOUR KIDSNER BATH GEL?

- Store in a dry and cool place between 10°C and 25°C.
- Do not use after the expiry date shown on the bottle.
- Kidsner Bath Gel should not be used for more than 30 consecutive days, which usually covers a whole treatment period.

WARNINGS:

- Keep out of reach of children.
- Avoid contact of Kidsner Bath Gel with the eyes
- Should the Kidsner Bath Gel enter the eyes, wash the eyes with plenty of clean water. Should an irritation persist, seek advice from your general practitioner.
- If your child is hypersensitive (allergic) to any of the ingredients, do not use Kidsner Bath Gel.
- Consult a general practitioner if the child develops a fever, the rash spreads to the eyes, the skin around the spots becomes swollen, painful or very red. Avoid administering aspirin to children suffering from chickenpox.
